                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence is the human chisel protein (Csl), that is a member CC of the EF-Hand protein super family and is involved in signalling CC pathways. Csl protein is localised to the nucleus and has 86% homology CC to the mouse Csl. Structural homology between Csl and scallop regulatory myosin light chain is also detected. It is predominantly expressed in CC heart and skeletal muscles and is activated after the differentiation of CC cells. Csl functions in regulation aspects of differentiation or CC dataptive processes that maintain muscle homeostasis. This sequence can be used in the detection, diagnosis, prophylactic and therapeutic CC treatment of diseases such as those involving aberrant muscle cell CC development and functional activity. It is also used in the treatment of muscular and myotonic dystrophies, skeletal myopathies such as Duchenne CC muscular and myotonic dystrophies, skeletal myopathies such as Duchenne CC muscular dystrophy, myocardicis, myofiber atrophy, etc. The Csl gene CC sequence can also be used in gene therapy, for the production of transgenic animals and for drug screening.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

Sequences of the invention are also used in gene therapy. A transgenic non-human mammal comprising the sequences of the invention are useful for the development for medicaments for the treatments of heart diseases. The present sequence is 66214 protein encoded by an expressed sequence tag (EST) DNA.
                                                                                                                                                                                 Chisel protein; CB1; EF-Hand protein super family; muscle development; heart/skeletal muscle cell development; signalling pathway; murine; X chromosome; regulation; adaptive process; muscle homeostasis; nucleus; detection; diagnosis; prophylaxis; treatment; skeletal myopathy; muscular and myotonic dystrophy; Duchenne muscular dystrophy; therapy; Becker's myotonic dystrophy; heart failure; cardiac hypertrophy; differentiation; gene therapy; transgenic animal; drug screening; scallop regulatory myosin light chain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The patent discloses novel target genes abnormally expressed in heart tissues and their corresponding proteins. The invention also relates to methods for assessing the expression level of these genes. The method is used for testing the predisposition of mammals and preferably human for a heart disease or for an acute state of such a disease. It is all
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Identifying a subject at risk for a heart disease e.g. congestive heart failure, dilative cardiomyopathy, heart muscle disease, by quantifying the polypeptide expressed by genes abnormally expressed in heart tissue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          WPI;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence is the murine chisel protein (Csl), that is a common control of the EF-Hand protein is super family and is involved in signalling pathways. Csl protein is localised to the nucleus and does not show significant homology to any known protein. Structural homology between Csl and scallop regulatory myosin light chain is however detected. It is predominantly expressed in heart and skeletal muscles and is activated after the differentiation of cells. Csl functions in regulation aspects of differentiation or adaptive processes that maintain muscle condifferentiation or adaptive processes that maintain muscle chambers and the detection, diagnosis, prophylactic and therapeutic treatment of diseases such as those convolving aberrant muscle cell development and functional activity. It is also used in the treatment of muscular and myotonic dystrophies, skeletal myopathies such as Duchenne muscular dystrophy, myocarditis, myofiber atrophy, heart failure, carddac hypertrophy, myocarditis, cmyofiber atrophy, etc. The Csl gene sequence can also be used in gene to therapy, for the production of transgenic animals and for drug screening.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence is the xenopus chisel protein (Cs1), that is a C member of the EF-Hand protein super family and is involved in signalling pathways. Csl protein is localised to the nucleus and does not show cs significant homology to any known protein. Structural homology between CC sl and scallop regulatory myosin light chain is however detected. It is compared to the differentiation of cells. Csl functions in regulation aspects of differentiation or cells. Csl functions in regulation aspects composition in the detection, diagnosis, csp from the differentiation or adaptive processes that maintain muscle chameostasis. This sequence can be used in the detection, diagnosis, csp prophylactic and therapeutic treatment of diseases such as those ccl involving aberrant muscle cell development and functional activity. It is also used in the treatment of muscular and myotonic dystrophies, cs keletal myopathies such as Duchenne muscular dystrophy, and Becker's myotonic dystrophy, heart failure, cardiac hypertrophy, myocarditis, cm myofiber atrophy, etc. The Csl gene sequence can also be used in gene creating.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Best Loc

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to novel human secreted polypeptides. The polypeptides and antibodies to the polypeptides are useful for determining the presence of or predisposition to a disease associated with altered levels of polypeptide. The polypeptides are also useful for identifying agents (agonists and antagonists) that bind to them. Cells expressing the proteins are useful for identifying a therapeutic agent for use in treatment of a pathology related to aberrant expression or physiological interactions of the polypeptide. Vectors comprising the nucleic acids encoding the polypeptides and cells genetically engineered to express them are also useful for producing the proteins. The proteins are useful in genetic vaccination, testing and therapy, and can be used as nutritional supplements. They may be used to increase stem cell proliferation; to regulate haematopoiesis; and in toone, cartilage, tendon and/or nerve tissue growth or regeneration; and in treatment of leukaemias. AAU29510-AAU33304 represent the amino acid in treatment of leukaemias. AAU29510-A5133304 represent the amino acid

   The present sequence is obtained from a clustral X alignment with CC protein 608. Protein 608 was identified using the method of the invention after subjecting rat osteoblasts to mechanical stress. Expression of the CC 608 gene was found to be upregulated by about 3-fold in cells subjected to mechanical strain. The specification describes a method for the CC identification of genes responsive to a specific mechanical stress. The CC method comprises applying the mechanical stress to an organism (tissue CC or cells comprising bone cells), isolating the specific cellular CC fractions and extracting mRNA from them, and differentially analysing the CC genes whose expression is responsive to a specific stress. The identified genes whose expression is responsive to a specific stress. The identified CC genes whose expression is responsive to a specific stress. The identified genes are employed in determining risk associated with a physiological or CC disease state. The risk determination methods are used for testing a cC medicament for gene therapy. These medicaments, or genes identified by the method of the invention, are used for treating to osteoporosis or controlling a physiological or disease state (especially osteoporosis or the symptoms or other factors causing or contributing to osteoporosis or class symptoms or other conditions involved in mechanical stress or its bone development.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to isolated polynucleotide (I) and CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC polynucleotides are also used in diagnostics as expressed sequence tags CC for identifying expressed genes. (I) is useful in gene therapy techniques CC for identifying expressed genes. (I) is useful in gene therapy techniques CC (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating CC disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in CC diagnostics, forensics, gene mapping, identification of mutations cresponsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and CC amino acid sequences of data and products dependent on DNA and CC amino acid sequences of the invention.

CC Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at first polynument of the printed specification, but was obtained in electronic format directly from WIPO at first polynuments.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Best Loc

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           autism), cardiovascular disorders (e.g. atherosclerosis and myocarditis), autoimmune disorders (e.g. rheumatoid arthritis, multiple sclerosis, ankylosing spondylitis, Addison's disease, Sjogren's Syndrome, vitiligo, asthma, attopic dermatitis and diabetes mellitus), inflammatory disorders (e.g. pancreatitis, sarcoidosis and allogenic transplant rejection) and cancers and neoplasms (e.g. leukaemia, Burkitt's lymphoma and multiple myeloma). The presence or absence of a mutation in the nucleic acid encoding the protein allows for diagnosis of or susceptibility to a pathological condition. The sequences are also useful in screening for agonists and antagonists of PTPase activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The sequence represents a human protein tyrosine phosphatase (PTPase) polypeptide. PTPase proteins and nucleic acids are useful for preventing, treating or ameliorating a medical condition. The medical conditions are disorders of the central and peripheral nervous system (e.g. Alzheimer's disease, Huntington's disease, Parkinson's disease, Tourette's syndrome, disease, Tourette's syndrome,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 obsessive compulsive disorder,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to novel genes (AAI99614-AAI99654) and proteins (ABB03062-ABB03085) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune hamolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's allergies, autoimmune allergies, autoimmune cancer and controllers autoimmune cancer and cancer and controllers autoimmune cancer and controllers autoimmune cancer and cancer

The enzyme polypeptides of the invention may comprise the functional classes of oxidoreductases, transferases, hydrolases, lyases, isomerases or ligases. The sequences of the invention are useful in the diagnosis, treatment, prevention and/or prognosis of a wide range of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               preventing, treating neural, immune system, muscular, reproductive, pulmonary, cardiovascular, renal, proliferative disorders and cancerous

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          vectors and host cells containing human HD-PTP nucleic acids; the recombinant production of HD-PTP, anticancer drugs containing HD-PTP; gene therapy compositions containing DNA encoding HD-PTP; diagnostic reagents containing HD-PTP oligonucleotides; antibodies specific for HD-PTP; and an immunoassay method using HD-PTP-specific antibodies for use in cancer diagnosis and investigation. HD-PTP proteins, nucleic acids and antibodies may be used in the treatment, investigation and diagnosis of cancers, particularly those of the lung. The present sequence represents a human HD-PTP fragment encoded by the cKAL16 cDNA fragment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   domain-protein tyrosine phosphatase (HD-PTP; AAB29661) and to human HD-PTP nucleic acids (AAC81224, AAC812825, AAC81262, AAC81263). The HD-PTP gene is located on chromosome 3p21.3. This region is frequently found to be deleted in lung cancers, and is therefore thought to contain a tumour suppressor gene. The invention also relates to expression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human tyrosine phosphatase with oncostatic activity encoded frequently deleted in lung cancer, useful for treatment and of tumors -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a novel human tyrosine phosphatase, histidine cdomain-protein tyrosine phosphatase (HD-PTP; AAB29661) and to human cdomain-protein tyrosine phosphatase (HD-PTP; AAB29661) and to human characteristic acids (AAC81224, AAC81265, AAC81262, AAC81263). The characteristic acids (AAC81224, AAC81265, AAC81263). The contain contain to be deleted in lung cancers, and is therefore thought to contain contain to be deleted in lung cancers, and is therefore thought to contain contain suppressor gene. The invention also relates to expression contain production of HD-PTP; anticancer drugs containing HD-PTP; containing HD-PTP; and an immunoassay method using HD-PTP; algencific for come in cancer diagnosis and investigation. HD-PTP proteins, nucleic acids of cancers, particularly those of the lung. The present sequence represents a human HD-PTP fragment encoded by the cKALII DNA fragment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention describes isolated, enriched or purified nucleic colds encoding PTP04, SAD, PTP05, PTP10, ALP and ALK-7 proteins. The acids encoding PTP04, SAD, PTP05, PTP10, ALP and ALK-7 proteins. The CC present sequence represents human ALP. The above proteins, other than CC ALK-7, are protein tyrosine phosphateases (PTP6) and are used to identify concluding NBP) in vivo or in vitro. These substances are used to treat colding NBP) in vivo or in vitro. These substances are used to treat colding NBP) in vivo or in vitro. These substances are used to treat colding NBP) in vivo or in vitro. These substances are used to treat colding NBP) in vivo or in vitro. These substances are used to treat colding NBP in vivo or in vitro. These substances are used to treat coldinary that involve the proteins, particularly cancer (e.g. leukaemia coldinary), while modulators of ALK-7 (which is a type I receptor coldinary), while modulators of ALK-7 (which is a type I receptor coldinary) for treating Alzheimer's, Parkinson's or Huntington's coldinary for treating Alzheimer's, Parkinson's or Huntington's coldinary the coldinary cancer (e.g. and long related sequences, uncleased as probes to identify and clone related sequences, coldinary coldinary coldinary to generate transgenic animals and in contents the therapy (optionally after mutation). Ab are used to determine the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

The invention relates to a novel human tyrosine phosphatase, histidine CC domain-protein tyrosine phosphatase (HD-PTP, ABR2661) and to human CC HD-PTP nucleic acids (AAC81224, AAC81225, AAC81262, AAC81263). The CC HD-PTP gene is located on chromosome 3p21.3. This region is frequently CC found to be deleted in lung cancers, and is therefore thought to contain CC atumour suppressor gene. The invention also relates to expression CC vectors and host cells containing human HD-PTP nucleic acids; the CC recombinant production of HD-PTP; anticancer drugs containing HD-PTP; CC creagents containing HD-PTP oligonucleotides; antibodies specific for CC HD-PTP; and an immunoassay method using HD-PTP proteins, nucleic acids and antibodies may be used in the treatment, investigation and diagnosis CC crepresents a substantial portion of the human HD-PTP proteins.
                                                                                                                                                             밁

"An unusual C(2)-domain in the active-zone protein piccolo:
implications for Ca(2+) regulation of neurotransmitter release.";

EMBO J. 20:1605-1619(2001).

-I- FUNCTION: MAY ACT AS A SCAFFOLDING PROTEIN INVOLVED IN THE
ORGANIZATION OF SYNAPTIC ACTIVE ZONES AND IN SYNAPTIC VESICLE
TRAFFICKING (BY SIMILARITY).

-I- SUBURIT: INTERACTS WITH RABAC1/PRA1 AND PROFILIN.

-I- SUBCULTIAR LOCATION: CONCENTRATED AT PRESYNAPTIC SIDE OF SYN.
                                                                                                                                                                                                                                                                                                                                                                                                   -i- ALTERNATIVE PRODUCTS: 2 ISOFORMS; 1 (SHOWN HERE) AND 2;
PRODUCED BY ALTERNATIVE SPLICING.
-i- DOMAIN: C2 DOMAIN 1 IS INVOLVED IN BINDING CALCIUM AND PHOSPHOLIPIDS. CALCIUM BINDS WITH LOW AFFINITY BUT WITH SPECIFICITY AND INDUCES A LARGE CONFORMATIONAL CHANGE.
-i- SIMILARITY: CONTAINS 2 C2 DOMAINS.
-i- SIMILARITY: CONTAINS 1 PDZ/DHR DOMAIN.
